

Baltic Protect System™

A beautiful floor for years to come

Care and maintenance of varnished wood floors

If you have a wood floor finished with varnish, and you want years of service from it as decoration of your house, always use maintenance agents dedicated to this type of refinements. In this way you will extend the life-span of the varnish coat, as well as plaster over tiny scratches and minor damage, which might emerge during everyday wear and tear.

Varnished floors should be dusted with a specially dedicated brush or a soft-bristle broom. At least once a week use a Cleaning Concentrate for varnished floors, and once a month thoroughly freshen up the floor surface using a proper Agent of the Baltic Protect System™.

Cleaning Concentrate for varnished floors

A product intended for everyday care of varnished wood floors.

Volume 1 litre.

Care and maintenance of oiled wood floors

Finishing a wood floor with oil serves to bring out the true character of wood. An oiled floor is anti-static – it does not absorb dust, and so is allergy-friendly.

Another advantage of oiled floors is the ease with which you can remove slight scratches from their surface – it only takes some fine-grained sandpaper to gently remove the damaged surface, and then a proper Revitalizing Agent of the Baltic Protect System™ to cover the area under repair.

An oiled wood floor requires particular care. Remember to regularly sweep the floor surface with a specially dedicated brush or a soft-bristle broom. At least once a week use a Cleaning Concentrate for oiled floors, and once a month thoroughly freshen up the floor surface using a proper Agent of the Baltic Protect System™. Remember to choose a proper agent for the floor surface refined with white oil.

How to preserve the beautiful look of your floor for many years?

The Baltic Wood floors are made out of 100% wood, which is a natural material. To maintain the best shape of your wood floor for many years, follow some straightforward guidelines:

Regularly use Baltic Protect System™ maintenance agents respectively dedicated to varnished or oiled floors. This will allow you to enjoy their beauty for a long time.

Make sure you use doormats – a mixture of sand and water carried on shoe soles acts as sandpaper. Doormats placed at entrance

and terrace doors effectively protect the floor against damage.

Use floor protection furniture pads – chair and furniture legs can scratch the floor and so you would be well-advised to use felt protective pads for any piece of furniture; for swivel chairs use hardwood floor casters.

Maintain the air humidity level of about 40-60% and the temperature of 20°C. In winter when the humidity drops, use an air humidifier.
